For over two decades the leaders and scientists behind InMode have been revolutionizing the medical aesthetic industry with state-of-the-art light, RF and laser solutions that essentially launched and shaped an industry. The research and development team holds over 70 patents and has a proven track record of success.

With InMode you may choose all or a combination of the most in-demand applications based on your unique patient demographics. Never before has there been a single platform that offers the best, the latest, and the exceptional.

New Technology, Saves Time, High Patient Satisfaction.

Fast ROI

Clinically Validated

No Pulse Counters

Lunch Time Procedures

No Consumables*

*Exception is Fractora with nominal consumables

"I HAVE NEVER BEEN MORE PLEASED WITH THE RESULTS OF ANY OTHER TECHNOLOGY IN MY OFFICE THAN WITH FRACTORA."

Dr. Victor Rueckl was able to earn \$91,125 in practice revenue from the use of just ONE of the applicators in 90 days, with no marketing expenditures. Ask to read his business case study.

$$2 \times \$2000 = \$4000 = \text{Your Monthly Payment Recouped!}$$

Packages of Your Choice Average Package Fee Revenue

Can you afford to pass up this opportunity?

“INMODE OFFERS THE MOST COMPREHENSIVE COLLECTION OF IN-DEMAND AESTHETIC APPLICATIONS. PREVIOUSLY, PHYSICIANS HAD TO BUY 3-4 DEVICES IN ORDER TO SATISFY PATIENT NEEDS. INMODE HAS DEVELOPED A PLATFORM THAT PROVIDES SUPERIOR TREATMENT OUTCOMES AND CAN GROW WITH YOUR PRACTICE.”

Dr. Gary Lask
Board Certified Dermatologist,
UCLA

“All patients re-epithelialized within 4-7 days. There were no cases or instances of delayed healing, no significant adverse reactions and specifically, no hypo-pigmentation, PIH and no hypertrophic/hypotrophic scars.”

Fractional Ablative Radiofrequency Resurfacing In Asian And Caucasion Skin: A Novel Method For Deep Radiofrequency Fractional Skin Rejuvenation
Journal of Cosmetics, Dermatological Sciences and Applications, 2012

“The average circumferential reduction was 3.58 cm with range of 1.5 cm-4.4 cm. There were no non-responders observed in the study. Average Vectra measured improvement in the pit depth or “smoothness score” was 2.9 mm or 60% (range 1.1 mm-6.3 mm).”

Introduction Of A New Non-Invasive Device For Long-Term Localized Fat Reduction And Cellulite Improvement Using Controlled, Suction Coupled, Radiofrequency Heating And High Voltage Ultra-Short Electrical Pulses
Journal of Clinical & Experimental Dermatology Research, 2012

“A single full-face Fractora treatment is able to demonstrate more than 50% improvement in an array of indications for the aging face. Wrinkle and tightening improvement was slightly better at the 6 month follow-up than after 3 months, indicating a long process of collagen remodeling.”

Synchronous Fractional Radio-Frequency Ablative And Non-Ablative Treatment For Comprehensive Rejuvenation Of Aging Skin
Anti-Aging Medical News, 2011
