The Leading Aesthetic Practice Resource™

New Se Simplifie

Fueled by the body contouring procedures are more commonly, these procedures provide considerable patient satisfaction. Those days are for non-invasive treatments that allow little to no downtime. Manufacturers have

market with devices based on laser, radiofrequency (RF) or ultrasound technology. One company has recently introduced a new class of RF device allowing practitioners to achieve measurable outcomes on large areas without any discomfort to the patient.

Diolaze

Combining a large treatment spot size with a fast repetition rate and peak power, Diolaze is a new champion of speed in the laser hair removal market. Diode scanning technology and built-in safe guards provide a unique combination of high tech sophistication with efficacy and safety. Features include a bundled diode pulse guide scanner, optimal wavelength for improved outcomes, high peak power for melanin absorption and a built-in sapphire cooling tip to provide a high level of patient comfort using 3PC (pre, parallel and post cooling).
