

Dr. Youn on The Dr. Oz Show Featuring Fractora Firm

Dr. Anthony Youn, a well-known plastic surgeon, joins Dr. Oz to discuss the Fractora Firm treatments. These treatments are less than half the price and take less time than a regular face lift.

Dr. Oz is amazed by how patients can save \$10,000 and avoid a surgical face lift with Fractora Firm. This procedure provides immediate results that patients can see and is a device that doctors can trust.

Patient Noel receives a Fractora Firm treatment live. To see the before and after effects of the treatment she only treats half of her face. She notices a huge difference from the side of her face that has been treated. Dr. Oz points out that her cheek and eyebrow look lifted, and she has less of a jowl.

Dr. Youn explains that Fractora Firm utilizes radio frequency waves which reverses aging. It helps decrease fine lines and wrinkles that have accumulated over decades of aging and sun damage. The thermal image camera shows the heat on Noel's face as the Fractora Firm device is being used.

This Fractora face lift is the biggest bang for the buck. Not only does it cost much less compared to the traditional face lift, it is also not a painful experience. There is no down time and the procedure only takes half an hour, as opposed to traditional procedures that take 3-4 hours.

The pros of this device are numerous and non-invasive procedures are increasing in popularity. This device is FDA approved and available in many locations around the United States.
